

# 6G RIS

## SHAPING THE RADIO CHANNEL FOR BEST CONNECTIVITY

Heinz MELLEIN  
Technology Manager Wireless Markets

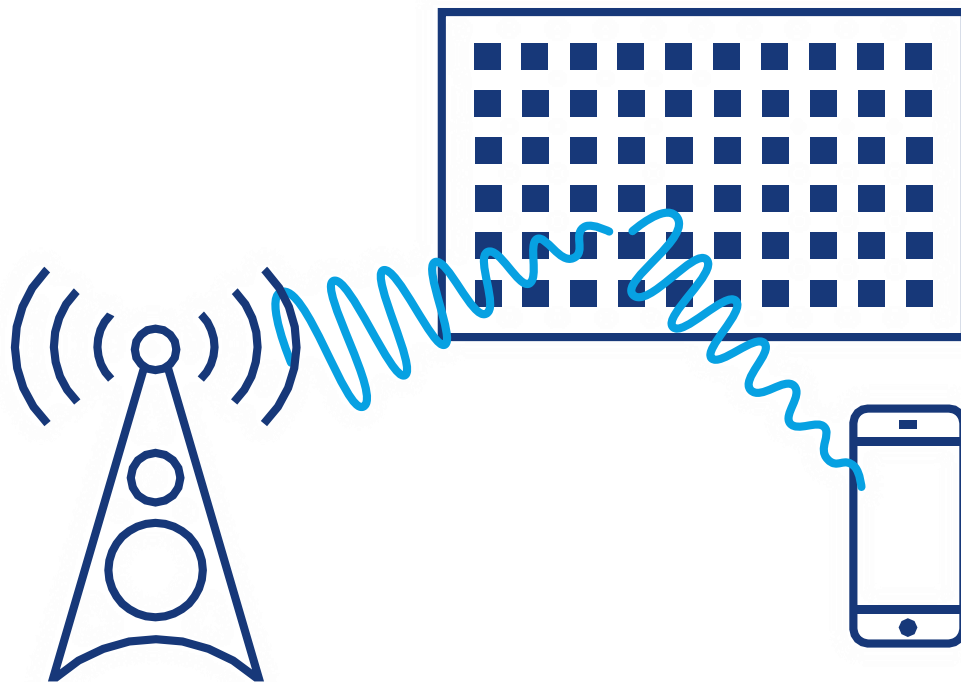

**ROHDE & SCHWARZ**

Make ideas real

# SCOPE

- ▶ 6G outlook
- ▶ Motivation for RIS
- ▶ What is RIS?
- ▶ How to measure RIS?
- ▶ Anything else about RIS?
- ▶ What does the industry think about RIS?
- ▶ R&S and RIS

# 6G INNOVATION CANDIDATES

There is certain diversity on 6G technology candidates from different regions but majority seem common

(sub)THz

JCAS

RIS

AI

VLC

Extreme large-scale MIMO

Coding/modulation

Network topology

Full duplex

Security

# EXPECTED 6G ROADMAP

# SCOPE

- ▶ 6G outlook
- ▶ **Motivation for RIS**
- ▶ What is RIS?
- ▶ How to measure RIS?
- ▶ Anything else about RIS?
- ▶ What does the industry think about RIS?
- ▶ R&S and RIS

# REMEMBER: IT IS ALL ABOUT CAPACITY (AND LATENCY) ...

$$\log_2(1 + SNR)^*$$

$$\left[ \frac{\text{bps}}{m^3} \right] = \left[ \frac{\text{bps}}{\text{Hz}} \right] \cdot \left[ \frac{\text{node}}{m^3} \right] \cdot \left[ \frac{\text{Hz}}{\text{node}} \right]$$

## Spectral efficiency

- SNR optimized reception
- MCS, MIMO
- Interference control
- ...
- ... RIS ?

## Radio node density

- DSS
- Small cells
- D2D
- ...
- ... RIS ?

## Bandwidth per node

- Carrier aggregation
- mmWave spectrum
- (sub)THz spectrum
- ...
- ... RIS ?

\*Shannon-Hartley Theorem

# ... AND STILL THE SAME (MOBILE) RADIO CHANNEL

Taking advantage of multipath channels, i.e. making use of SPACE:

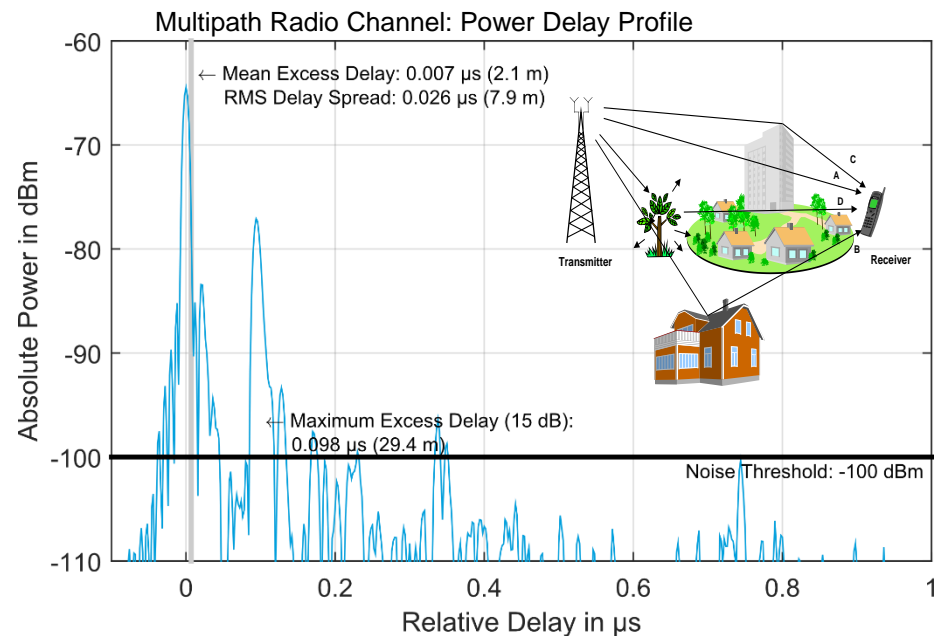

**RX Diversity:** multipath reception

**TX Diversity:** spatial channel coding

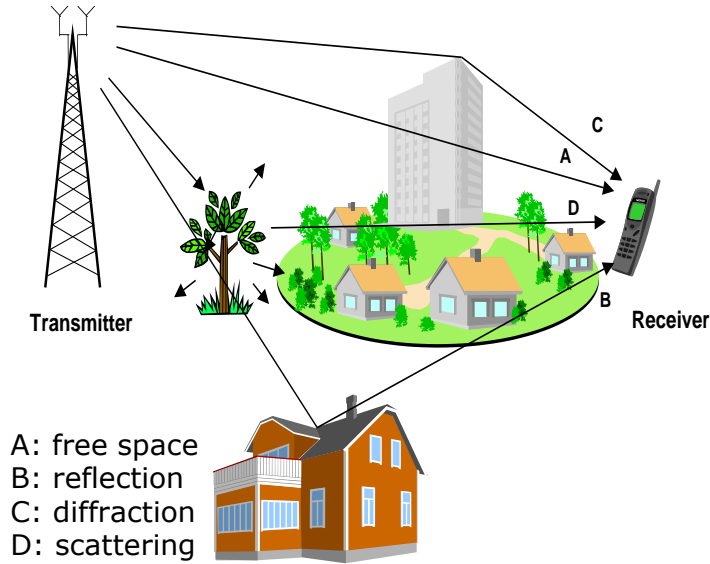

**MIMO schemes:** spatial multiplexing

**Adaptive beamforming:** select the best path

However, what if there are no suitable paths at all?

# BASIC PROBLEM: SOLVE THIS EQUATION

$$r(t) = h(f, t)s(t) + n(t)$$

What is the job of a radio communication designer, so far?

**Design transmission schemes  $s(t)$  to target channel  $h(f, t)$**   
e.g. CP-OFDM, MIMO, MCS etc.

Receiver's are optimized for the known transmission schemes, channel models and noise/interference assumptions.

In any case, so far, we take the radio channel as it is!

**Now, RIS will allow to design the channel!**

# RIS PROMISE: PROGRAMMING THE ENVIRONMENT

- ▶ Current network design assumptions on the wireless environment
  - Set by the environment and cannot be „controlled“.
  - Wireless channel to be addressed by sophisticated transmission and reception schemes
  - Select BS locations accordingly (e.g. based on radio propagation measurements/simulations)
- ▶ Emerging paradigm towards next generation of wireless communication
  - Breaking free from the postulate that regards the wireless environment as “uncontrollable”
  - Introduce means to allow „programming“ the wireless environment
  - Simple model of the RF multipath environment: Assembly of reflecting/diffracting objects
  - First choice: Reconfigurable Intelligent Surfaces (RIS)
  - Enabling technology: Metamaterial
- ▶ **Smart Radio Environment (SRE), SW Defined Environment (SDE) ?**

# SCOPE

- ▶ 6G outlook
- ▶ Motivation for RIS
- ▶ **What is RIS?**
- ▶ How to measure RIS?
- ▶ Anything else about RIS?
- ▶ What does the industry think about RIS?
- ▶ R&S and RIS

# RECONFIGURABLE INTELLIGENT SURFACES

## PROMISING TECHNOLOGY FOR FUTURE WIRELESS COMMUNICATIONS

- ▶ RIS or intelligent reflecting surface (IRS) tune wireless environments to increase spectrum and energy efficiencies
  - Reconfigurable reflect arrays
  - Liquid crystal meta-surfaces
  - Programmable meta-materials

RIS-aided wireless communications

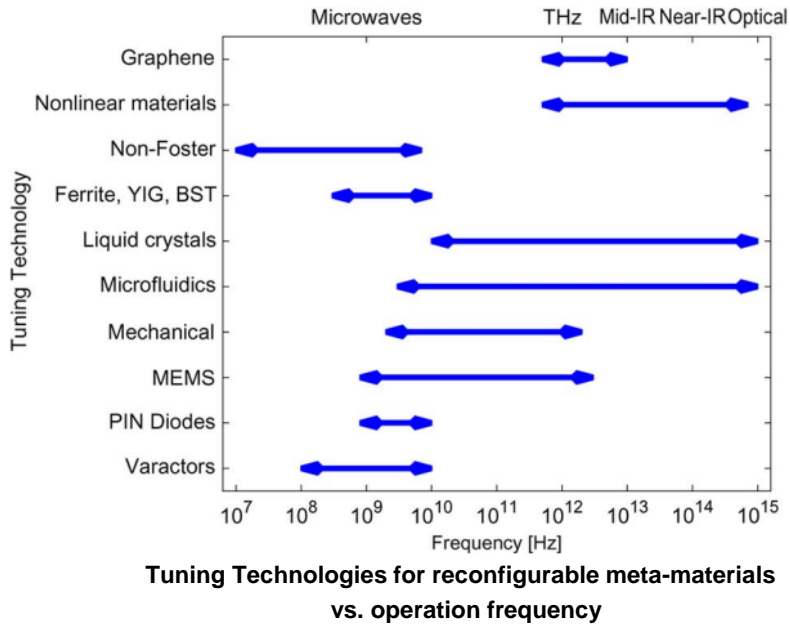

“man-made structures become more and more electronically active, with integrated electronics and wireless communication making the entire environment intelligent”

Prototype transparent dynamic metasurface

Prototype of transparent dynamic metasurface

# METAMATERIAL EM WAVE MANIPULATION CAPABILITIES

- ▶ Wavefront shaping
- ▶ Focusing
- ▶ Anomalous reflection
- ▶ Asymmetric transmission
- ▶ Polarization control
- ▶ Vorticity
- ▶ Absorption
- ▶ Diffuse scattering
- ▶ Frequency shifting
- ▶ Non-reciprocity

## Relevant RF testing areas:

Regulatory testing  
e.g. according to RED

EMC testing  
e.g. according to CISPR32

Conformance testing ???  
e.g. according to 3GPP?

# 3D RIS ASSESSMENT IN ANECHOIC CHAMBER

„Regarding RIS as an intelligent antenna“

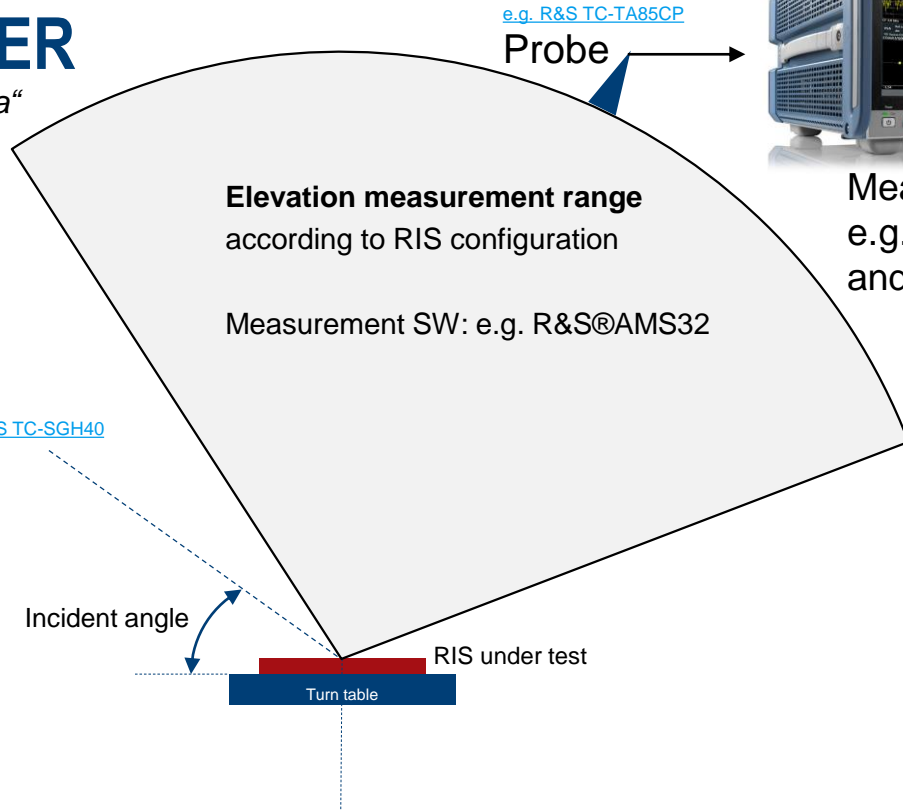

Feed path

SGH

e.g. R&S TC-SGH40

Feed signal generation  
e.g. R&S®SMW200A  
vector signal generator

e.g. R&S TC-TA85CP

Probe

Measurements  
e.g. R&S®FSW signal  
and spectrum analyzer

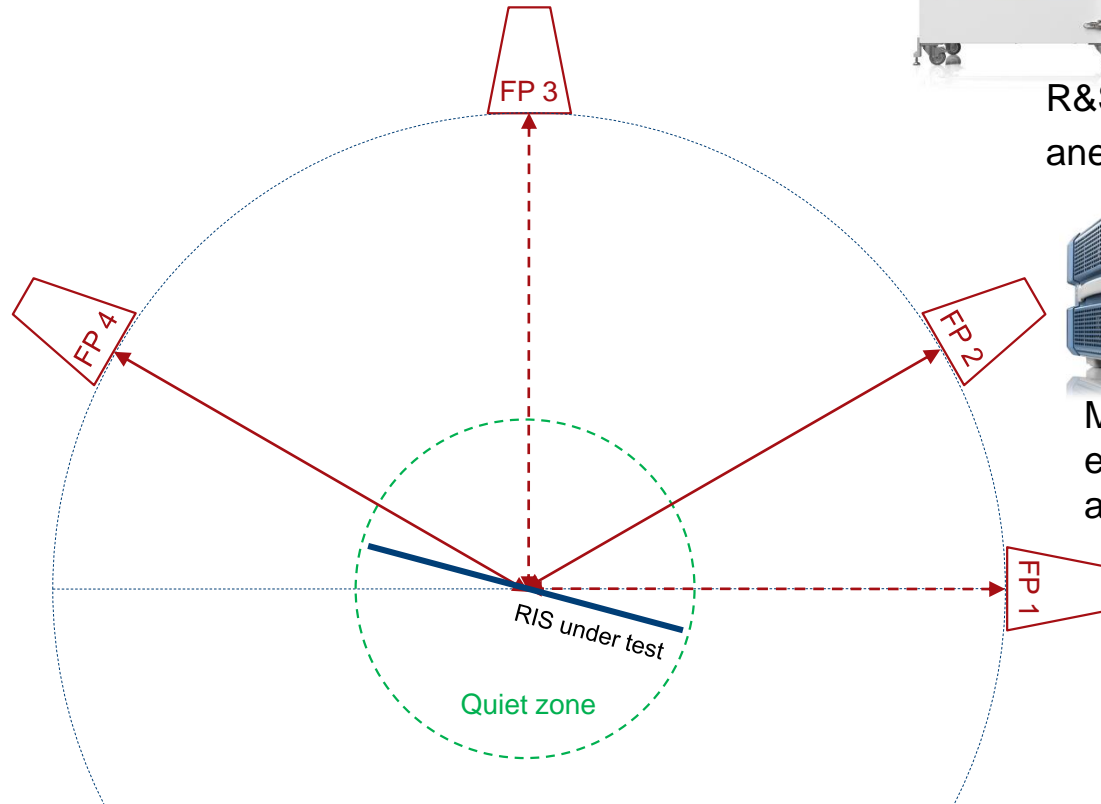

# MULTI-ANGLE RIS ASSESSMENT SETUP

„Regarding RIS as an intelligent reflector“

Feed signal generation  
e.g. R&S®SMW200A  
vector signal generator

Rohde & Schwarz

R&S®ATS1800M  
anechoic chamber

Measurements  
e.g. R&S®FSW signal  
and spectrum analyzer

Turning of RIS allows  
any impinging wave angle

FP = Feed or Probe

# RIS PERFORMANCE TEST

„Regarding RIS as a network node“

Signal quality measurements based  
e.g. on 3GPP or IEEE WLAN signals:

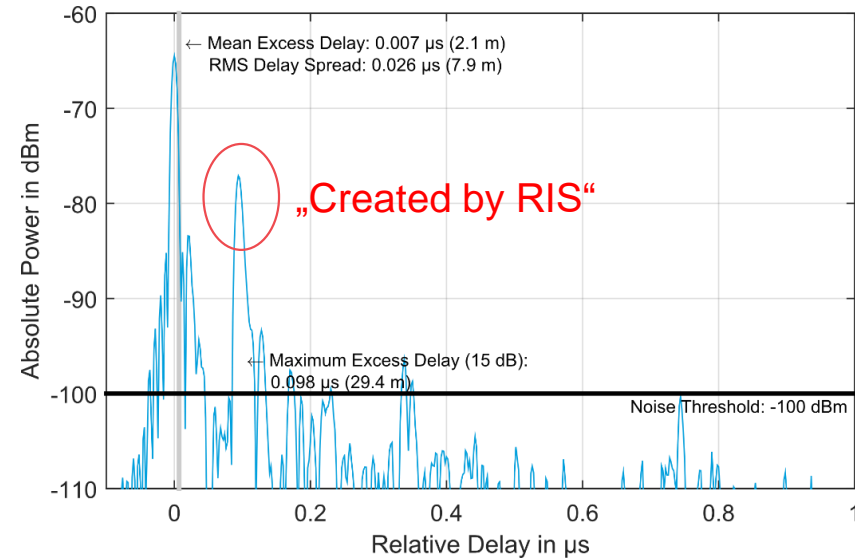

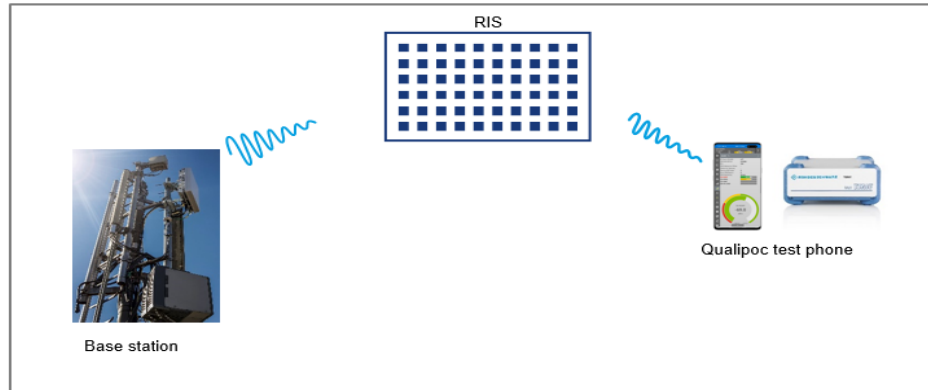

- EVM
- BER/BLER
- etc.

To assess possible (unwanted) signal  
quality degradation by RIS!

# CHANNEL SOUNDING AND COVERAGE MEASUREMENTS

„Regarding RIS as a radio channel component“

Channel sounding with dedicated sounding signals or in live network !

# SCOPE

## ResearchAndMarkets.com

July 26, 2022 07:22 AM Eastern Daylight Time

DUBLIN--(BUSINESS WIRE)--The "6G Communications: Reconfigurable Intelligent Surface Materials and Hardware Markets: GHz, THz, Optical 2023-2043" report has been added to **ResearchAndMarkets.com's** offering.

"6G Communications:  
Reconfigurable Intelligent Surface  
Materials and Hardware Markets:  
GHz, THz, Optical 2023-2043"

Huge emerging market for 6G reprogrammable intelligent surfaces

6G wireless communication coming in around 2030 needs new materials and devices not least "reprogrammable intelligent surfaces RIS" everywhere.

ZTE builds efficient way to 5G-Advanced and 6G with RIS solution

# SCOPE

- ▶ 6G outlook
- ▶ Motivation for RIS
- ▶ What is RIS?
- ▶ How to measure RIS?
- ▶ Anything else about RIS?
- ▶ What does the industry think about RIS?
- ▶ **R&S and RIS**

# R&S AND RIS

- ▶ Our portfolio includes all ingredients to test RIS today:
  - RF signal generators
  - RF signal and network analysis
  - Anechoic chambers, feed antennas, antenna measurement systems etc.
  - Channel sounding solutions
  - Coverage measurement systems
- ▶ We are engaged in a number of research projects related to RIS, e.g. 6G-LICRIS
- ▶ We are active member in standardization of RIS related topics, e.g. ETSI ISG RIS, 3GPP, IEEE, RISTA
- ▶ Check out at [www.rohde-schwarz.com/wireless/6G](http://www.rohde-schwarz.com/wireless/6G)

# TAKE AWAY

- ▶ Academia and key industry players are exploring the boundaries and started looking into next generation of wireless communication aka 6G.
- ▶ Reconfigurable intelligent surfaces, enabled by metamaterials, are judged one important out of several key technology components to enhance radio coverage, spectral efficiency, reduce power consumption and tackle radio propagation challenges.
- ▶ Rohde & Schwarz is actively engaged in this research topic, contributing our expertise in test and measurement for all aspects related to this promising technology.
