

5G Private Network Deployment

May 31st, 2024

James Shue
CTO & SVP

AGENDA

- 5G Private Market
- Deployment Challenges and Requirements
- Understanding 5G Private Networks
- Technical Aspects of Deployments
- Deployment Case Studies

Deploying Private Networks by Sectors, and Forecast

Source: GSA Private Mobile Networks Reports, Feb 2024

Source: SCF market forecast report, July 2023

Enterprise and indoor, by architecture

Disaggregated and virtualized architecture will be the keys
vRAN and Open RAN will grow at CAGR 33%, 62% for 3-unit configuration

Open RAN will be high growth CAGR of 94%
Open RAN will account for 33% of vRANs or clusters in public networks, and 38% in the enterprise

"5G, Edge and AI are Essentials to drive Digital Transformation."

"5G is the key to bridge things together."

Flexibility

- Wireless Connectivity
- Rapid Deployment

Clean

- Dedicated & Licensed Spectrum

Real-time

- Fast and Low Latency
- Low jitter

Efficiency

- Large Capacity
- Multi-connection
- Stable Throughput

Security

- Zero Trust
- Private and Safe

Deployment Challenges

Obstacles to deploying private wireless networks
Percentage of operators

- Tech integration is the main deployment challenge
- Policy/regulation follows (spectrum?)

Source: GSMA Intelligence Operators in Focus: Network Transformation Survey, Aug 2023

What is holding private network back?

- Cost/TCO and uncertainty ROI
- Future-proofed or wrong technology
- Lock-in to a specific vendor or operator
- Complexity and lack of familiarity – comparing with Wi-Fi
- Uncertainty around use cases

Source: Cambridge Consultants: Developing private network technologies for demanding use cases, Nov 2023

Enterprise should consider:

- **Defining Key Connectivity Use Cases:**
Drive and differentiate their business
- **Requirements Analysis:**
Levels of complexity, bandwidth, latency, and security needs for current and future scenarios
- **Control and Automation:**
Potential need for rapid and flexible changes to both physical operations and applications

Vendors must consider:

- **Competition with Other Solutions:**
Public 5G networks and Wi-Fi networks
- **Meeting Requirements:**
Existing and future requirements for latency, device density, and interoperability with other systems
- **Platform Readiness:**
AI-enabled automation, robotics, and digital twins, etc.

Devices

5G CPE

5G USB Dongle

5G Camera

5G Spectrum

Public Spectrum

By Telco Operators

Private Spectrum

Not limited

RAN

RU

Pegatron, Nokia, Ericsson, Huawei, Airspan, JMA Wireless, Baicells, Commscope, Benetel, NEC, Fujitsu, WNC, Lions, Foxconn, VVDN, etc.

CU/DU (BBU)

Pegatron, Nokia, Ericsson, Mavenir, Parallel Wireless, IS-Wireless, Corning, JMA, AltioStar, Fujitsu, Dell, HTC, QCT, etc.

OAM/SMO/RIC

Pegatron, CellWize, AMDocs, GenXcomm, etc.

5GC

Cloud Based

On-Premise

Nokia, Ericsson, Cisco, Microsoft, Mavenir, Athonet, Druid, Saviah, etc.

UPF

Pegatron, Kaloom, Ericsson, Nokia

Applications

Manufacturing

Education

System Integrator

Wipro, TechMahindra, Infosys, Capgemini, Accenture, Tata Consulting, IBM, NEC, NTT Data, T-Systems, Lockheed Martin, NTT Data, CTC, Sumitomo, MKI, NEC

Countries with 5G Private Spectrum/Bands: Government Policy

N48 CBRS

USA

N78 Private Spectrum

Brazil
Chile
Croatia
Czech
Denmark
Finland
France
Germany
Poland
Netherlands

N77 Private Spectrum

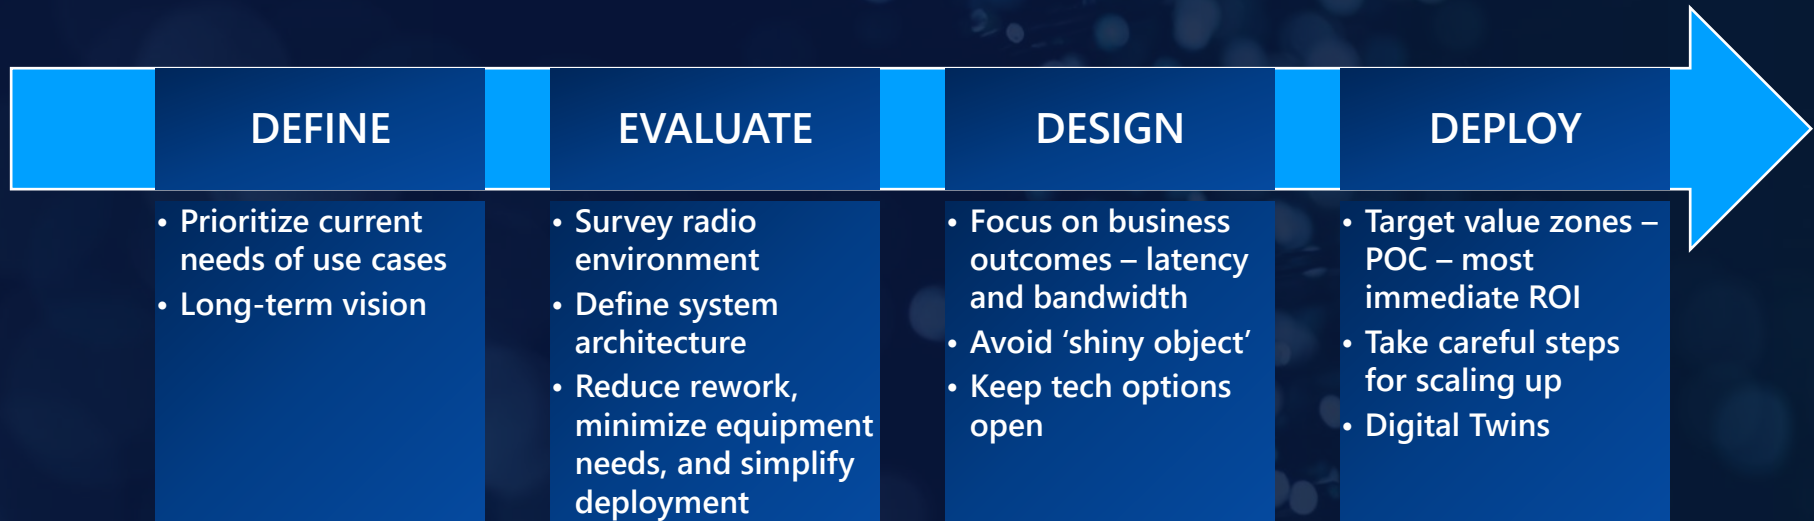

Belgium
France
Norway
Sweden
Spain
UK

N79 Private Spectrum

Japan
South Korea
Taiwan

Telco operators will use 5G public spectrum for private network if the countries without 5G private spectrum

5G Private Network Deployment Process

Use Cases: co-developed 50+ **use cases** with 5 themes around:

- Manufacturing/Automation/Logistics
- Utilities
- Transportation
- Education
- Disaster Rescue/Digital Resilience

Uses Cases - Manufacturing

- Coverage: 8400 m² (140m x 60m)
- Frequently change testing lines (6 mons)
- AGV should running smoothly
- AR collaboration - work around the full factory

- AI Vision for Assembly SOP
- AI Vision for surveillance and safety
- Digital Twins (cont.) – connect with various gateways and sensors to monitor networks and factory

Surveillance Camera

- With pre-modeling simulation, we can simulate the RSRP boundary and use SINR to estimate the maximum throughput for the applications.

RSRP Simulation

RSRP > -95dBm area

SINR Simulation

SINR > 18dB area

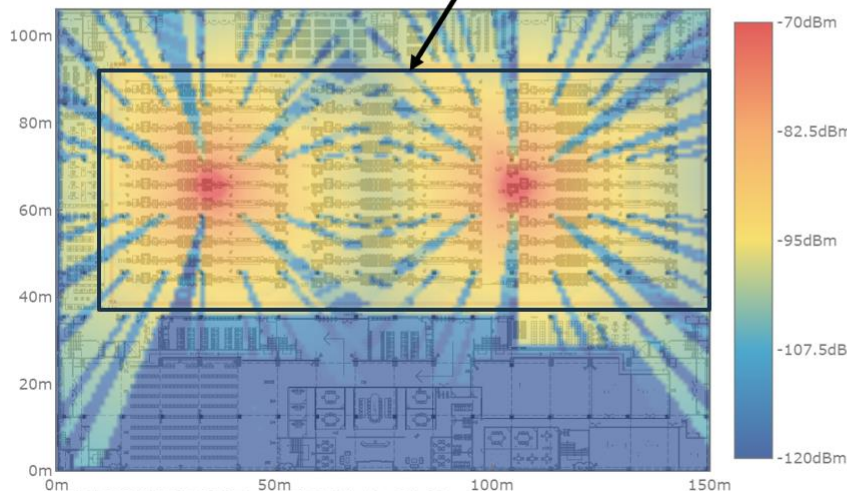

Using 2 cells to cover 8400m² factory
With pre-modeling simulation, we
can simulate the RSRP boundary and
use SINR to estimate the maximum
throughput for the applications.

RSRP

以RSRP>-95 dBm,計算場域覆蓋率 43%
以RSRP>-100 dBm,計算場域覆蓋率 77%

SINR

SINR>10dB, 計算場域覆蓋率 66%
SINR>5dB, 計算場域覆蓋率 84%

PEGATRON 和碩聯合科技

F=3450MHz, SCS=30KHz, BW=100MHz, RU output power=24dBm

CONFIDENTIAL

Using different RU mounting

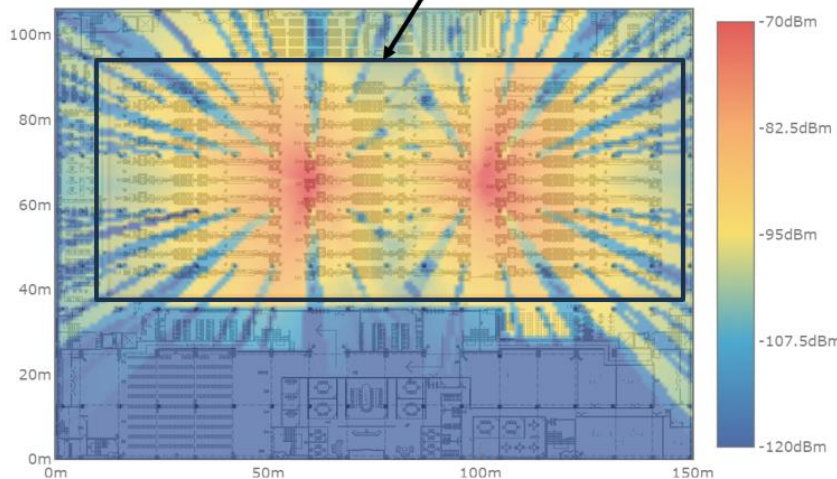

RU1 to RU2: $\Delta Y = 0\text{m}$

RU1 to RU2: $\Delta X = 40\text{m}$

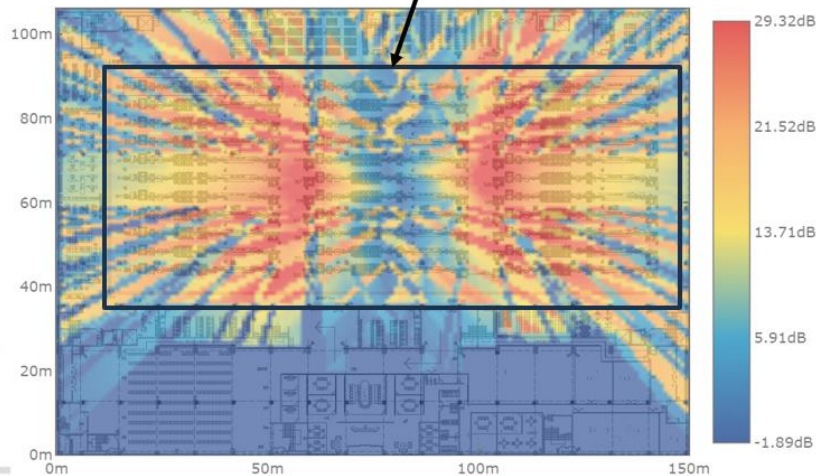

RSRP

以RSRP>-95 dBm,計算場域覆蓋率 52%
以RSRP>-100 dBm,計算場域覆蓋率 77%

SINR

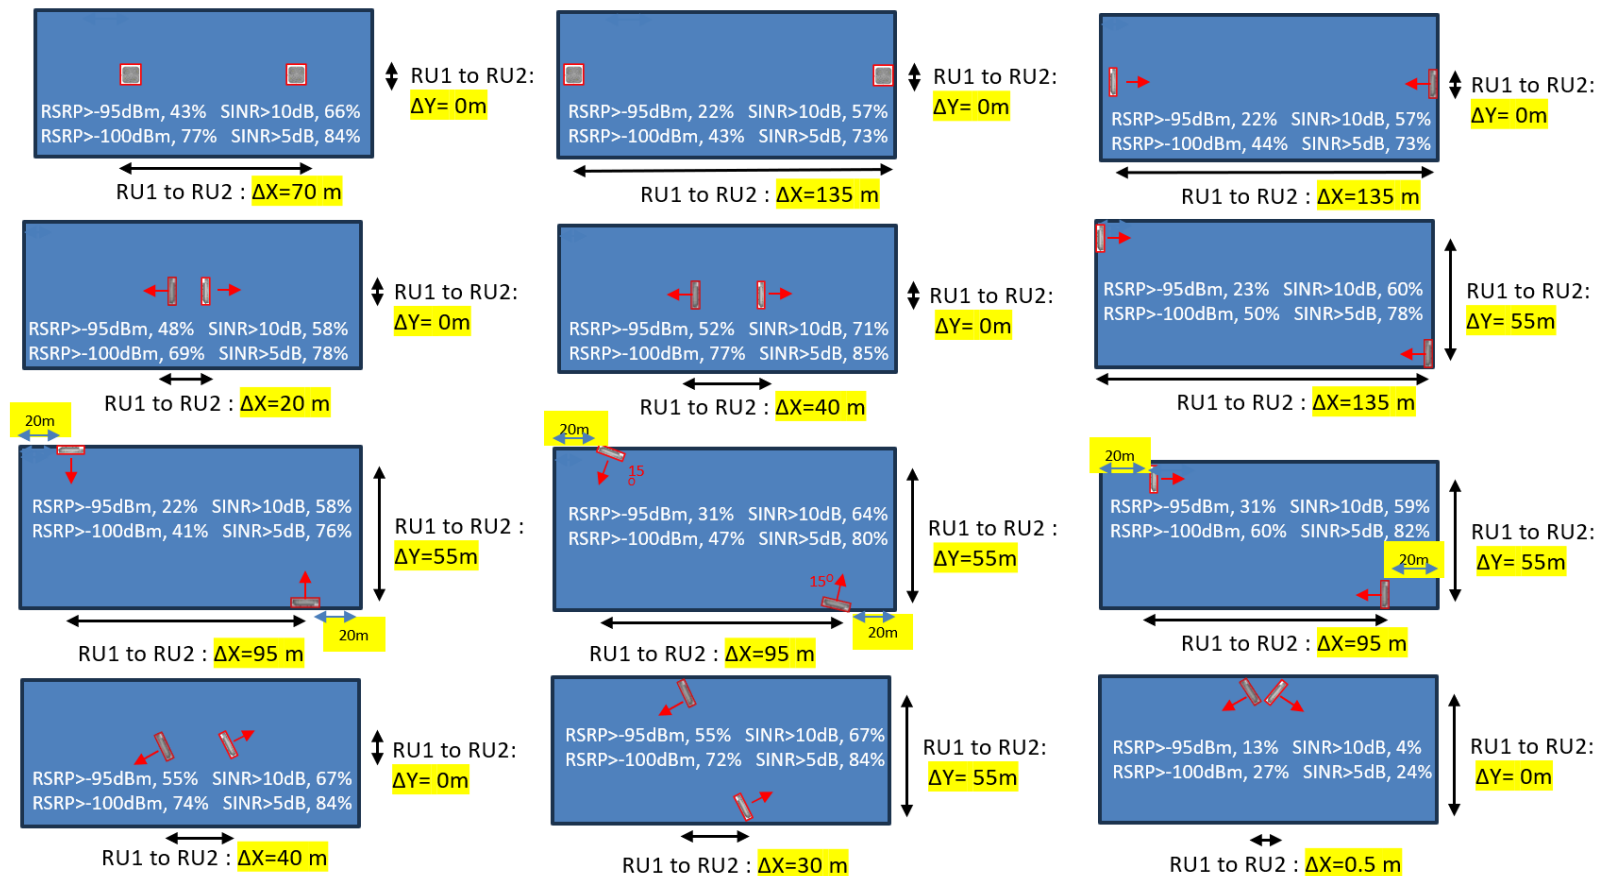

SINR>10dB,計算場域覆蓋率71%
SINR>5dB,計算場域覆蓋率 85%

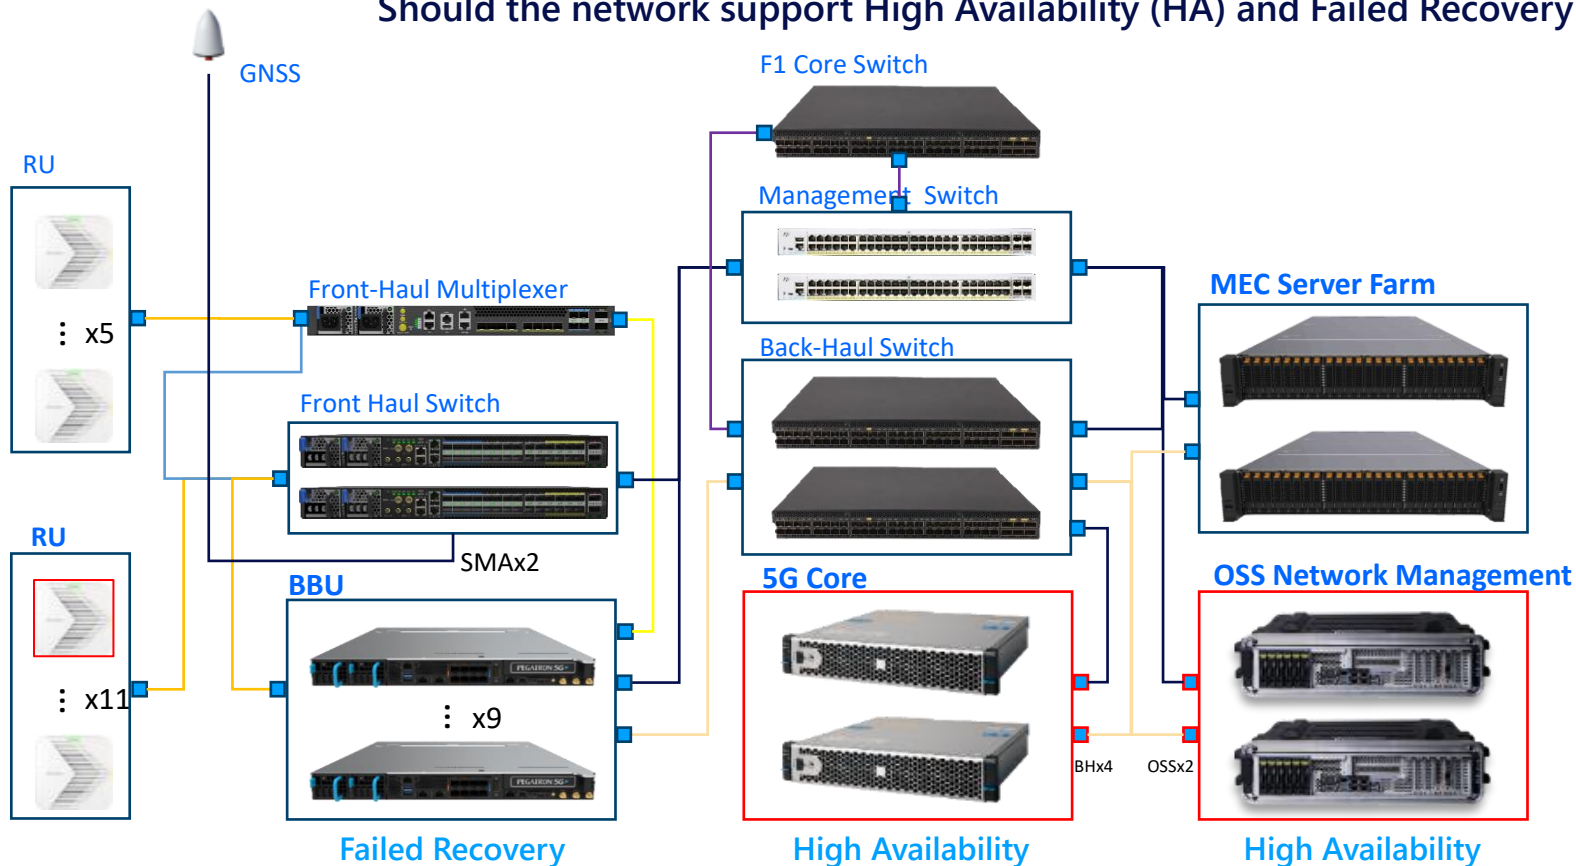

PEGATRON 和碩聯合科技

F=3450MHz,SCS=30KHz, BW=100MHz, RU output power=24dBm

Which Kind of the Deployment is Better?

Should the network support High Availability (HA) and Failed Recovery?
